

I have seen first-hand how the use of Broadband Over Power Line (BPL) technology has totally disrupted radio signal reception in the Virginia area. The continued growth and use of these systems will destroy vital radio communications used in emergency disaster response. If a terrorist group wanted to disrupt our communication systems, they would be hard pressed to find a better method than the use of BPL.

I feel strongly that as long as this BPL technology causes such radio interference, it should be prohibited.
